SUMMARY

Security+ Certified Cybersecurity Professional with hands-on experience in network traffic analysis, malware investigation, and Python-based automation. Proficient in Wireshark, Splunk, and digital forensics tools. Passionate about leveraging AI-driven approaches to enhance threat detection and cyber resilience.

EDUCATION

University of Georgia, School of Computing

Athens, GA

Master of Science, Major: Cybersecurity and Privacy (GPA - 3.7/4.00)

SRM University

Andhra Pradesh, India

Bachelor of Technology, Computer Science (GPA – 9.0/10.00)

CORE SKILLS

- **Security Tools:** Wireshark, Splunk, Autopsy, Burp Suite, Metasploit, Nmap, Ghidra, IDA Free, GDB
- **Programming & Scripting:** Python, Bash, PowerShell
- **Concepts:** Incident Response, Network Forensics, Threat Intelligence, Vulnerability Management, Digital Forensics
- **Frameworks:** NIST CSF, MITRE ATT&CK, OWASP Top 10

PROFESSIONAL EXPERIENCE

UGA Carl Vinson Institute of Government - CyberArch

Athens, GA

CyberArch Risk Review Intern

March 2025 – Present

- Conducted comprehensive cybersecurity risk assessments for organizations across Georgia using the **CIS Controls v8.0** framework, identifying and mitigating vulnerabilities that reduced potential exposure by 80%.
- Managed onsite and remote evaluations of **application security** and **infrastructure posture**, implementing baseline hardening standards to enhance resilience.
- Delivered detailed, **actionable recommendations** to improve compliance, reduce attack surface, and align system with **CIS benchmarks**.

SATRA Services and Solutions Private Limited

Hyderabad, India

Application Developer Summer Intern

June 2022 – August 2022

- Designed and developed interactive mobile app prototypes using **Figma** with adherence to UI/UX best practices.
- Automated report generation using **MySQL Server queries**, improving accuracy and consistency while reducing manual data entry errors by **40%**.

PROJECT EXPERIENCE

NetSleuth – Network Security Detection Tool

- Developed a **Python** automation script to parse and filter packet data, identifying suspicious vs. benign captures based on defined traffic indicators.
- Collected and analyzed **PCAP** files using Wireshark and TShark to inspect real network traffic for potential malicious activity.

Reverse Engineering and Malware Analysis Project

- Performed static and dynamic analysis on executable files to understand code functionality and identify potential malicious behaviors.
- Utilized **Ghidra**, **IDA Free**, **GDB** to reverse-engineer binaries and extract behavioral indicators.

Steganography & USB Image Forensics Project

- Identified and extracted hidden payloads embedded in image files using steganalysis and binary inspection (e.g., **binwalk**, **strings**).
- Created forensic disk images of a USB device(**dd**), then analyzed the image to recover deleted files and metadata.

TRAINING & CERTIFICATES

- **CompTIA Security+ Certificate:** Includes Access Control, Security Configuration, Network Security.
 - **Skills include** Firewall configuration, Identity and Access Management (IAM), Security Awareness, Data Loss Prevention (DLP), Incident Response, SIEM.
- **Google Cybersecurity Certificate:** Includes Linux, MySQL, and Python hands-on labs.
